REC\_DS using C\_Week 7\_COD\_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

### **Input Format**

The first line contains two integers, n and table\_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

#### **Output Format**

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

## Sample Test Case

```
Input: 5 10
       21 31 41 51 61
       3
       31 60 51
       Output: Value 31: Found
       Value 60: Not Found
       Value 51: Found
       Answer
       #include <stdio.h>
       #define MAX 100
       // You are using GCC
       void initializeTable(int table[], int size) {
          for (int i = 0; i < size; i++) {
            table[i] = -1:
          }
       }
e(int:
برزاndex = num (
int start = index;
       int linearProbe(int table[], int size, int num) {
          int index = num % size;
```

```
while (table[index] != -1 && table[index] != num) {
           index = (index + 1) % size;
           if (index == start) {
              return -1;
         }
         return index;
      void insertIntoHashTable(int table[], int size, int arr[], int n) {
         for (int i = 0; i < n; i++) {
           int index = linearProbe(table, size, arr[i]);
           if (index != -1) {
            table[index] = arr[i];
      int searchInHashTable(int table[], int size, int num) {
         int index = num % size;
         int start = index;
         while (table[index] != -1) {
           if (table[index] == num)
              return 1;
           index = (index + 1) \% size;
           if (index == start)
              break;
         return 0;
      int main() {
         int n, table_size;
         scanf("%d %d", &n, &table_size);
         int arr[MAX], table[MAX];
         for (int i = 0; i < n; i++)
           scanf("%d", &arr[i]);
insertIntoHashTable(table, table_size);
```

```
int q, x;
scanf("%d", &q);
for (int i = 0; i < q; i++) {
    scanf("%d", &x);
    if (searchInHashTable(table, table_size, x))
        printf("Value %d: Found\n", x);
    else
        printf("Value %d: Not Found\n", x);
}

return 0;
}

Status: Correct

Marks: 10/10</pre>
